

OVERHEAD TRANSMISSION

Booth & Associates has been providing transmission line design services to the electric utility industry since 1960 and has become a recognized leader in our field. We have designed transmission projects up through 345kV and have utilized tubular steel, lattice, concrete, wood, and composite poles, with many requiring engineered, unguaged self-supporting structures with foundation. Our primary goal is to provide an efficient design that meets all applicable design standards, while keeping a focus on constructibility.

PRIMARY CONTACTS

DAVID HUFFSTETLER
Senior Vice President

GRACYN BANCROFT, PE, PMP
Manager of Transmission Engineering

JOHN B. WILLIAMS, PE
*Vice President
Baltimore Office*

AREAS OF SPECIALTY

- *Line Design*
- *Transmission Routing Studies*
- *Land and Property Survey*
- *Easement Acquisition*
- *Transmission Line Design*
- *Material and Construction Specification and Procurement*
- *Project Management & Closeout*
